

Good things come in small packages ...

Locator 2

"The new Locator 2 from Hocking brings you all the advantages of power and performance, but in a package so compact and light, you can keep it in your pocket"

Replacing the highly successful Locator UH and UH-B, Locator 2 embodies the latest technology and eddy current NDT innovation, allowing you to stay one step ahead.

Locator 2's small size and weight (900 gms inc. battery) allows one handed operation, giving more flexibility and reduced fatigue. The big, bright, high resolution screen with LED backlight means that it can be used under almost any conditions.

Of course, in the case of Locator 2, reduced size does not mean reduced power. Locator 2 gives top performance inspections on all metal structures and components, and because the lithium-ion batteries run for 14 hours from a single charge, tasks can be completed quicker and with less interruptions.

Locator 2 is also very simple to use. The intuitive operation creates operator confidence after only a few hours, allowing you to get on with the job quickly and easily.
